THE ORIGINAL

Pet Net

**Because Pet Owners Should Not Have
to Sacrifice Safety!**

ON THE GO WITH FIDO?

Many of us are! How many times have you run out the door with your pet companion without thinking ahead for their safety or your own? For many of us “man’s best friend” is part of the family, so we take them along on errands around town and even on longer road trips. Statistics show the #1 cause of accidents is “driver distraction,” and often when we take our pets for a ride they DO distract us from our driving.

We proudly introduce THE PET NET, a convenient, versatile, and affordable safety device that helps prevent driver distraction.

SAFETY for the Driver and the Dog!

Where Did it Come From?

Most inventions come from ordinary people who are frustrated with something not working well and see a better way. “Necessity is the mother of invention” as the saying goes, and the origin of The Pet Net is a perfect example of that.

The Pet Net was created by a soccer mom who is constantly on the go with her two boys and often toting the family dog around too. On one occasion the family’s Australian Shepherd, Bailey, almost caused a serious accident as she was trying to get into the front seat.

Seeing the need for the safety of the whole family, the inventor searched the Internet, pet shops and catalogs for an answer, but only found expensive products that were both inconvenient and impractical. Knowing seatbelt harnesses or bulky, rattling bars would never work, she was inspired to create a device that is easy to use, comfortable for the pet, and best of all...

AFFORDABLE FOR EVERYONE!

Meet Bailey and the Inventor!

HOW DOES IT WORK?

Constructed from a durable vinyl-mesh screening, The Pet Net is a see-through barrier that permits the driver to see throughout the vehicle and maintains visibility for the pet into the front seat.

With the Pet Net’s unique design, you can create a custom fit using sturdy grommet points and flexible bungee straps that attach around interior handles, hooks, and seatbelt housings. This versatile attachment system creates the potential for installing The Pet Net in two places, behind the front seats, OR in the rear for some vehicles with a rear cargo area. Installation in the rear cargo area is a great option to have when traveling with children AND pets. The included carrying bag makes storage easy when not in use.
