**What Wouldn't  
You Do...**

**To Save Your Home  
from FIRE?**

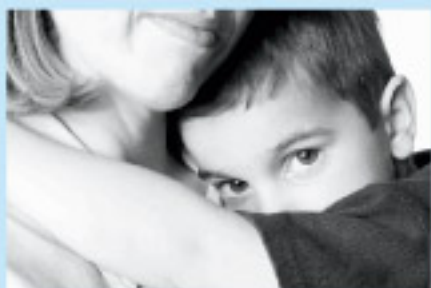

**Dear Home Owner:**  
**It doesn't matter if you live  
on the East or West Coast,  
Suburb or Country, anyone  
can be at risk of losing  
their home in a fire.**

Your homeowner's insurance covers the financial loss if your home is involved in a fire, but what if you could spare your family the trauma and stress of having to go through that experience in the first place?

We read about out of control wildfires in the newspapers and see it on the evening news. You watch insurance premiums rise as millions of dollars a year are spent in rebuilding families after the devastation of fire rips through a community.

Sadly, most causes of wildfires start among average conditions; ignited by sparks from unsafe outdoor practices, lightning strikes and regretfully even intentional arson. These conditions are then fuelled by dry climates, overgrown wooded underbrush and areas where combustibles are improperly stored.

*But now you don't have to stand by  
and watch your family's biggest  
investment go up in smoke!*

# INTRODUCING the *Rooftop Fire Defense System*

Temporary Fire Suppression Unit

**Peace of Mind for Today's  
Homeowner!**

## *Rooftop Fire Defense System*

Made of durable PVC and solid fittings, The Rooftop Fire Defense System (RFD) combines durability with the ease of use. Simply attach the RFD to an outdoor water or garden hose, use the guiding pole and wheel assembly to direct the mount into place on the top of your roof and turn on the faucet.

The water system can spray a 45 ft. radius or 2,000 square feet to dampen all most types of roofing designs with the added benefit of wetting down surrounding landscape and shrubbery further protecting potential ignitables near your home.

Weighing about 4lbs. the Rooftop Fire Defense System easily stores in a shed or in the garage until needed.
